INTRODUCING A WEALTH OF MOTOROLA ACCESSORIES

Turn your Motorola two-way radio into a solution with Motorola Original accessories and batteries.

A headset to allow you to work hands-free; an earpiece for discreet communications; a high capacity battery for longer shift times; a carry case for working on the move... Whatever your requirements, Motorola offers the widest portfolio of accessories and batteries, all of which are tested to the same exacting standards as the radios with which they are used.

What is important to you when selecting accessories?

Safety

Motorola's portfolio of two-way radios are supported by a selection of headsets and carry cases which are particularly suitable for protecting team members who in turn focus on the safety of the organisation's people, property and equipment. For those working in potentially explosive environments, Motorola also offers a range of intrinsically safe accessories for use with intrinsically safe radios.

Robustness

Workers operating in the harshest of environments need rugged accessories to support their Motorola radios. All our accessories are tested to the same demanding standards as our radios. Our range of remote speaker microphones, headsets and chest packs are particularly suited to the most challenging of operational environments, as are Nickel Cadmium batteries, helping users keep in touch in the face of adversity.

Ease of use

All our accessories are designed with the user in mind. Some solutions, however, are particularly easy-to-use and suited to those radio users who recently started using two way-radio for the first time. For these users, Motorola recommends its range of economical earpieces, lighter weight headsets and alternative compact carry accessories which make two-way-radio the most easy and accessible way of keeping the team in contact.

Efficiency

In order to survive in today's highly competitive environment, organisations have to maintain maximum levels of productivity. For the most sophisticated organisations, 2 or 3 wire earpieces as well as specialist audio products, make radio usage more efficient leaving hands free to work. For maximum energy efficiency, lithium Ion batteries are particularly suitable as they can last for longer shifts and have the most efficient energy to weight/size ratio. To streamline the energy management for radio fleets, Motorola's Impres™ solutions charge and maintain batteries intelligently improving battery performance.

Earpieces, Headsets and Specialist Solutions

With a wide range of audio accessories in this section, there is always a solution to suit your working environment and make using your Motorola radio even easier.

A headset allows you to keep your hands on the job without missing important messages, whilst an earpiece is ideal for discreet communication, e.g. for covert operations and other security activities where obvious radio usage can make the job more difficult.

Another key benefit of both headsets and earpieces is that they keep sensitive messages within the team rather than broadcasting them to anyone within earshot of the radio.

A number of specialist solutions have been designed for sophisticated users with very particular communication requirements. These include helmet com and ear microphones that use bone induction technology to allow radio users to keep in touch in high noisy environments.

Remote Speaker Microphones

One of the most popular and versatile ranges of Motorola audio accessories, Motorola remote speaker microphones (RSMs) are rugged, reliable and easy-to-use. RSMs can be clipped to a lapel or pocket and allow users to send and receive messages without removing the radio from the belt. Some RSMs include remote volume control and a jack for an optional earpiece for discreet message receipt.

Public Safety Speaker Microphones incorporate an antenna and so can also extend radio coverage when worn higher up on the body than the radio.

Audio - Earpieces

ONE WIRE EARPIECES

- Available in a range of styles to match user requirements
- Permanent radio message awareness
- Small and discreet

TWO WIRE EARPIECES

- Combined earpiece and microphone/PTT for flexible and discreet use
- Comfortable for extended use
- Can be worn in either ear

THREE WIRE EARPIECES

- Separate earpiece, microphone and PTT suitable for more demanding users
- Ensures effective communication and particularly suitable for covert or discreet use

EARPIECES FOR RSM

- Constant radio awareness ideal for monitoring voice traffic
- Plugs into remote speaker mic for discreet communications

Audio - Earpieces

Single earpieces in a range of styles to provide discreet communication. Combined earpieces and microphone/PTT (2- Wire) for flexible discreet use. Separate earpieces, microphone and PTT (3- Wire) for more complex activities including covert use.

Operation: Can the accessory be used to transmit and/or receive a voice message?

PTT: Does the accessory have an integrated push-to-talk (PTT) button, negating use of the radio PTT?

VOX Capability: Can a message be sent without the user pressing the PTT button on the radio or accessory (when VOX is supported by the radio)?
For more information please contact your local authorised Motorola communication solutions provider.

Extra VOX switch on PTT: Are the PTT and VOX functions combined in a switch?

Intrinsic Safety Standard: Does the accessory meet any safety standards?

Audio - Headsets and Specialist Solutions

ULTRA LIGHT WEIGHT HEADSETS

- Stylish and light weight for customer-facing users
- Innovative design that can be worn on either ear
- In-line push-to-talk button for ease of use

LIGHT WEIGHT HEADSETS

- Improved comfort for extended usage
- Ideal for use in environments with moderate noise levels
- Enhanced communication privacy

HEAVY DUTY HEADSETS

- Noise-cancelling microphone and noise reducing earmuffs to ensure clear communication in noisy environments
- Suitable for use with safety headgear
- Rugged and hard-wearing design

MEDIUM WEIGHT HEADSETS

- Noise-cancelling microphone for use in noisy environments
- Suitable for use with safety headgear
- Rugged and hard-wearing design

SPECIALIST AUDIO ACCESSORIES

- Specialist headsets including bone induction and throat and ear microphones for use in high activity/ extremely noisy environments
- Discreet and easy to wear for extended periods

Audio - Headsets and Specialist Solutions

Ultra light and light weight headsets for comfortable handsfree radio operation. Medium and heavy duty headsets providing noise reduction on received audio and noise compensation on microphones.

Specialist headsets including bone induction, throat and ear transducers for use in high activity or challenging environments.

Audio - Remote Speaker Microphones (RSMs)

REMOTE SPEAKER MICROPHONES

- Provide convenient location of key radio controls, high power audio output with optional discreet audio earpiece
- Most durable and flexible accessory with or without remote antenna for increased range
- Robust and water resistance for the most challenging environments

Audio - Remote Speaker Microphones (RSMs)

Most durable and flexible accessory with or without remote antenna capability. Provides convenient location of key radio controls, high power audio output or optional discreet audio earpiece. True extension of radio with equivalent robustness in challenging environments.

Audio Jack: Enables in combination with earpiece, a discreet message reception.

Volume Control: Can the user control the level of volume?

Noise Cancelling: Can the accessory reduce the background noise when speaking?

Emergency button: How does the end-user communicate an emergency situation?

Intrinsic Safety Standard: Does the accessory meet any safety standards?

Carry

Carry

What radio users want to do is communicate, not carry a radio. With a Motorola carry accessory you can put the radio on your belt and forget about it until you need to communicate. When combined with an audio accessory you only need to take the radio off your belt when it's time to go home.

Motorola has a number of hard and soft, leather and nylon carry cases, rugged plastic belt clips and quick-release plastic holsters. Specialist solutions such as nylon chest packs are also available.

Carry

A

SPRING CLIPS

- A simple and economical solution
- Easy-release mechanism
- Secure attachment of radio

B

PLASTIC HOLSTERS

- Robust and light weight solution
- Attaches easily to most belts

C

NYLON CARRY CASES

- Protects radio from dust and water
- Durable, light and easy-to-clean
- Allows display visibility and access to keypad
- Ensures secure belt mounting
- Radio can be easily used in the case

D

LEATHER CARRY CASES

- Helps protect radio from dust, water and daily knocks
- Hard-wearing leather
- Allows display visibility and access to keypad
- Case detaches easily from the belt loop for use
- Attaches easily to most belts

LEATHER CARRY CASES WITH SWIVEL BELT LOOP

- Helps protect radio from dust, water and daily knocks
- Hard-wearing leather
- Allows display visibility and access to keypad
- Increased comfort as swivel belt loop allows radio and case to swing as user moves
- Case detaches easily from the belt loop for use
- Attaches easily to most belts

E

F

ALTERNATIVE CARRY SOLUTIONS

- Including waterproof bags, chest packs, shoulder and wrist straps

Carry

Carry

Standard supplied carry aids are belt clips which provide simple relatively secure solution.

Nylon cases represent a good alternative to belt clips giving good abrasion resistance and low level protection to radio.

Leather carry solutions offer best resistance to environment and most secure radio retention.

A range of alternative carry solutions are provided for waterproof applications or diverse wearing requirements such as chest.

Batteries

Make sure that you always have the power to communicate at your fingertips with Motorola Original batteries.

To reflect the way that you need to work, Motorola offers different chemistries for extended shift times and reliability in different operating environments.

Nickel Cadmium (NiCd) batteries are long lasting and work well in the cold whilst Nickel Metal Hydride (NiMH) batteries are easier to maintain. Lithium Ion (LiION) batteries require the least maintenance and offer an unrivalled energy-to-weight ratio which allows for lighter and higher capacity batteries.

When used together, Motorola's latest battery and charger technology, Impres™, provides the power and convenience of intelligent battery charging and maintenance.

Impres™ batteries and chargers are particularly suitable for users who regularly leave their base for short periods of time and want to be able to put their radios back on charge upon their return. Thanks to Impres™, they can do this without compromising battery life by overcharging.

Impres™ single-unit chargers are ideal for individual radio users as they allow them to charge and maintain their own batteries without specialist training. Impres™ multi-unit chargers are the perfect solution for simplifying the charging and maintenance of batteries for organisations with larger radio fleets.

Batteries

A

Nickel Cadmium (NiCd)

- Capable of highest number of charge-discharge cycles.
- In comparison with the different chemistries, NiCd provides the best performance when the core battery temperature is -30°

B

Lithium Ion (Li-Ion)

- Lithium Ion (Li-Ion) for lighter batteries that work for longer
- No memory effect and no battery maintenance required

C

Nickel Metal Hydride (NiMH)

- Nickel Metal Hydride (NiMH) offers a cost effective energy solution with medium capacity ratings

D

IMPRES™

- Impres™ - Leading-edge smart energy technology from Motorola
- Save time and money with intelligent battery management
- Intelligent batteries holding usage data to communicate with Impres™ chargers and optimise charging and maintenance
- When used with Impres™ chargers, the technology prevents overcharging and resultant battery damage
- Particularly suitable for customers with large radio fleets and organisations without centralised battery management

Batteries

Batteries

Impres™ system, Motorola’s leading edge technology solution, batteries with usage data memory and optimum charge and conditioning capability.

Chemistry: Which chemicals store energy in this battery? Please refer to previous page for the benefits of each

Operational Time (hours): Typical usage time of battery when fully charged, presuming 90:5:5 standby: send:transmit ratio

Capacity (mAh): MilliAmp Hours - standard way of measuring the energy that a battery can store

Intelligent: Is this an Impres™ battery? Please see previous page for more information

Energy Density (mAh/cm²): The relationship between the size and energy contained in the battery. The higher the number, the more energy for the battery size

Number of Charge Cycles: Typical number of times in it's lifetime that the battery can be charge

Operating Temperature Range: Temperature range in which the battery will work when charged

Memory Effect: Poor maintenance of some battery chemistry types can reduce their energy capacity

Requires Maintenance: Battery life and performance can be increased for some battery chemistries by using a battery maintenance system. Contact your Authorised Motorola communication solutions provider for more information

Chargers

Motorola offers a range of single- and multi-unit chargers for our different radio platforms. Single-unit chargers give you the freedom to charge your own battery quickly and easily whilst multi-unit chargers make radio fleet management stress-free by allowing up to six batteries to be charged simultaneously.

When used together, Motorola's latest battery and charger technology, Impres™, provides the power and convenience of intelligent battery charging and maintenance.

Impres™ single-unit chargers are ideal for individual radio users as they allow them to charge and maintain their own batteries without specialist training. Impres™ multi-unit chargers are the perfect solution for simplifying the charging and maintenance of batteries for organisations with larger radio fleets.

Motorola Universal Impres™ chargers can be used to charge and maintain batteries from a range of different Motorola radios thus reducing the need for maintaining a number of different chargers for mixed radio fleets.

Chargers

Chargers

A

SINGLE UNIT CHARGERS

- Fast charges battery with or without radio
- Only 1 hour required to reach 90% capacity
- Convenient size for desktop usage
- Easy-to-use, durable design

B

MULTI UNIT CHARGERS

- Fast charges battery with or without radio
- Only 1 hour required to reach 90% capacity
- Convenient size for desktop usage
- Easy-to-use, durable design

IMPRES™ CHARGERS

- Impres™ - Leading-edge smart energy technology from Motorola
- Save time and money with intelligent battery management
- Reads data from Impres™ batteries to optimise charging and maintenance
- Prevents overcharging for batteries when radios are removed from and returned to chargers at regular intervals
- Particularly suitable for customers with large radio fleets and organisations without centralised battery management

C

VEHICLE ADAPTERS

- Convenient vehicle charging solution
- Allow extended operation without a mains power supply
- Easy to install

D

Chargers

Multiple Unit Chargers (MUC)

Fast charges six batteries with or without radio,one hour to 90% capacity, typical 3 hours to 100% capacity. Either with integral power supply or separate power supply. Stylish and solid design withstands tough treatment.

Professional GP140 - GP1280 and compact GP344/GP388 - GP644/GP688

Chemistry: Which battery chemistries does this charger support?

Number of Pockets: How many batteries can be charged simultaneously?

Intelligent: Is this an Impres™ charger? Please see previous page for more information

Maintenance System: Can this charger also be used to maintain batteries?

Operating Voltage AC: What mains voltage is required for this charger to operate?

Line Cord: Is this charger supplied with a US, UK or Euro plug?

Display: Does this charger feature a display to allow the user to read off activity information?
